

Nuclear Energy Data Needs

January 25, 2021

David Henderson

Program Manager, Advanced Modeling & Simulation
DOE Office of Nuclear Energy

Office of Nuclear Energy – Mission Pillars

- Advance nuclear power to meet the nation's energy, environmental, and national security needs.
- Resolve technical, cost, safety, security and regulatory issues through research, development and demonstration.

Existing Fleet

Advanced
Reactor Pipeline

Fuel Cycle
Infrastructure

Global
Competitiveness

Nuclear Beyond Electricity

NOW

Baseload Electricity Generation

FUTURE

Large Light Water Reactors

Small Modular Reactors

GEN IV Reactors

New Chemical Processes

Heat

e^-

Electricity

Industrial Applications

Hydrogen Production

Clean Water

Examples of Different Advanced Reactor Industry Designs

Gas Reactors

Fast Reactors

Molten Salt Reactors

Nuclear Data Needs

- Driven by the anticipated materials and reactor flux spectrum comprising advanced nuclear reactor and fuels technologies
- Materials includes:
 - Coolants (e.g. FLiBe, molten chloride salts)
 - Moderators (e.g. graphite)
 - Control materials
 - Advanced fuels and clad (e.g. UN, SiC, etc.)

		Reactor Coolants							
		Water		Liquid Metal		Molten Salt		Gas	
	Spectrum →	Fast	Thermal	Fast	Thermal	Fast	Thermal	Fast	Thermal
Fuel Form	Ceramic								
	Metallic								
	Molten Salt								
	TRISO								

*Chart not necessarily an exhaustive list

Nuclear Data Needs Priority

- Data needs priority should be driven by the requirements to accurately predict reactor behavior during steady-state and transient operation as well as postulated accident scenarios
 - Uncertainty quantification in the context of risk important to NRC licensing
 - Depends highly on the quality of covariance data for uncertainty propagation
- Priorities needs to be based on:
 - Identification of isotope data of significance as relates to the prediction of key parameters of interest
 - Parameters of interest include (to name a few):
 - Core reactivity
 - Decay heat
 - Power distribution
 - Feedback response due to material changes during anticipated and postulate transients
 - Source term for offsite dose
- For priority nuclear data, efforts need to generally focus on:
 - Missing data and “unphysical” artifacts in evaluations
 - Missing covariance data
 - Large covariance data

Thank you

Clean. **Reliable. Nuclear.**
